

AI_Assisted_Coding _Assignment_Week-1

Name : K.Yashwanth

RoINo:2403A52180

Assignment Number: 14.3

Task Description #1 – AI-generated HTML Page Task: Ask AI to generate a simple HTML homepage for a "Student Info Portal" with a header, navigation menu, and footer.

Prompt : write an HTML Code that generate a simple HTML homepage for a "Student Info Portal" with a header, navigation menu, and footer show information like my name is P.Srikar , I am studying in B-Tech 2nd year course CSE-AIML roll-no : 2403A52188, subjects : WTMP , AI , DAV , CN , CC etc..

```
padding: 10px 0;
position: fixed;
bottom: 0;
width: 100%;
}
</style>
</head>
<body>

<header>
<h1>Student Information Portal</h1>
</header>

<nav>
<a href="#">Home</a>
<a href="#">Profile</a>
<a href="#">Courses</a>
<a href="#">Grades</a>
<a href="#">Contact</a>
</nav>

<div class="container">
<h2>Welcome to the Student Information Portal</h2>

      </div>

```

Task Description #4 – Python Backend Integration Task: Ask AI to generate a Flask app that serves the HTML form (Task #3) and prints the username on successful login.

Prompt :write a HTML code that enerate a Flask app that serves the HTML form (Task#3) and prints the username on successful login.

```
from flask import Flask, render_template, request, redirect, url_for

app = Flask(__name__)

# You will need to save the login form HTML as a file named 'login.html'
# in a folder named 'templates' in the same directory as this Python file.

# For now, let's create a placeholder route for the login page.
@app.route('/')
def login():
    return render_template('login.html')

if __name__ == '__main__':
    # This will run the Flask development server
    # It will be accessible at http://127.0.0.1:5000/
    app.run(debug=True)
```

Next Steps:

1. Create a new folder named `templates` in the same directory where you save this Python file.
2. Save the HTML code for the login form (from our previous steps) as a file named `login.html` inside the `templates` folder.
3. Run the Python code cell above.
4. Once the Flask server is running, open your web browser and go to `http://127.0.0.1:5000/` to see the login form.

In the next step, I will add the code to handle the form submission and validation.
